Year Cycle for Table with Drawings

The diameter of the complete cycle is approximately 75 cm, and it can therefore be used as substitute material for the 'Year Cycle Floor', which has a diameter of approximately 105 cm and is more suitable for group work. The table material is suited to individual, free time work, but can be given as a group activity if there is a lack of space. The material is designed for the children to work without requiring much guidance.

Item No 444011

Price: £ 9,00

Fractions Part 1, Addition & Subtraction

This material has a clear structure, and this allows the children to work through it in stages, which can be spread out over a number of weeks.

The many small sections in the material allow the children to take regular breaks and then continue at a later time.

As the fraction circle and the material are usually used by a number of children in turns, I recommend giving the children little stickers, with which they can mark the card they last worked on.

This material has proven successful with many classes (also for children aged 12-13 years) when given as a free time activity.

Item No 421020

Price: £ 15,00

PLEASE NOTE! When delivered, our products are neither cut nor laminated. The accessories, like perspex boxes, file caskets and so on, that are sometimes shown in the catalogue, were only taken to demonstrate a possible use of our items. They are not part of the item itself and therefore are not included.
